

Including Our Library (a sample main.cpp is included as an example)

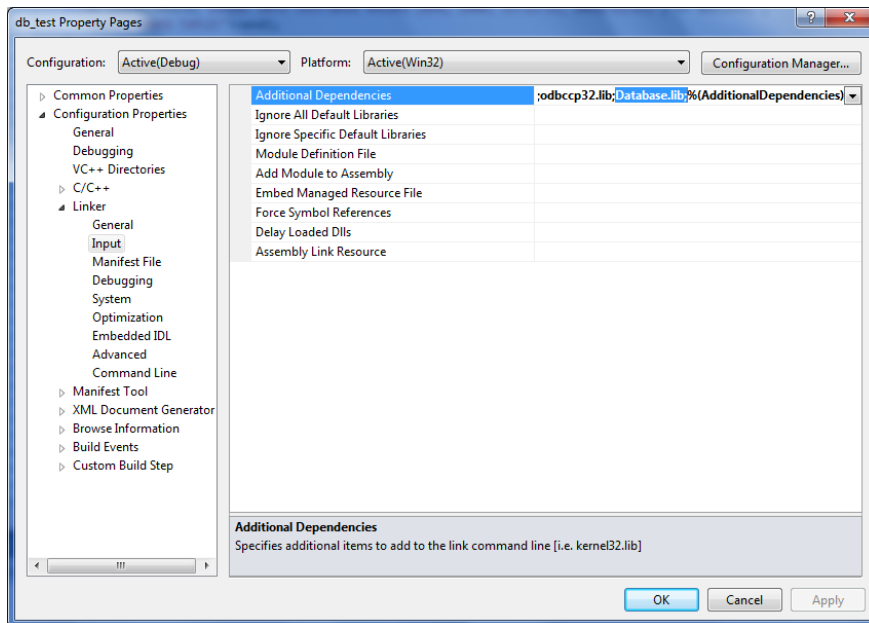

1) Add all files to your project directory

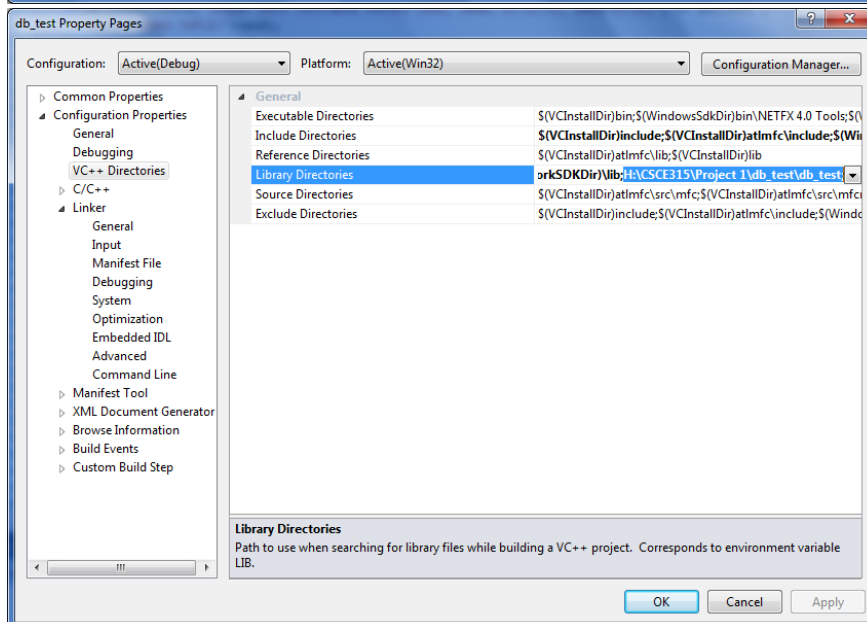

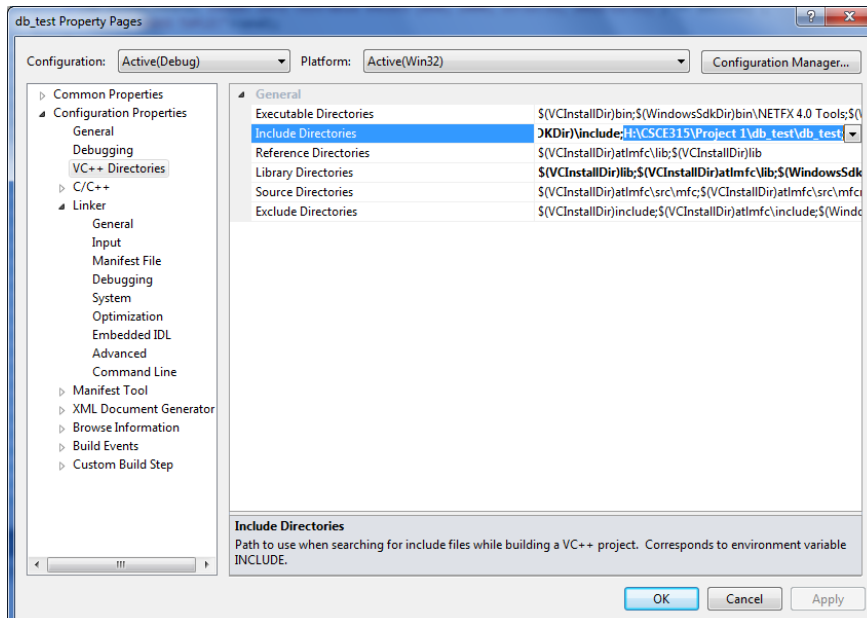

2) Copy the path for your project files

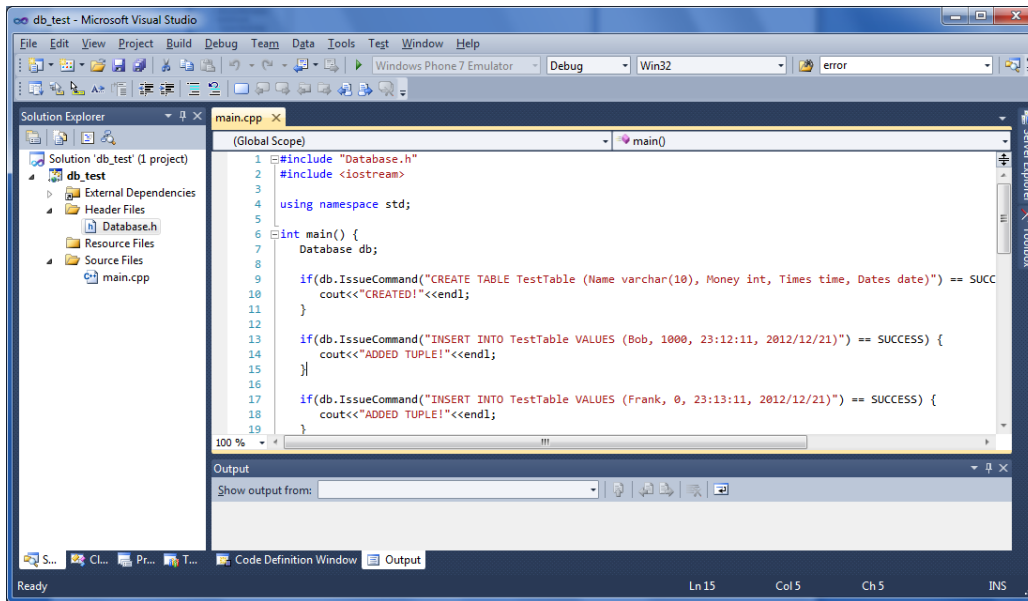

- 3) Right click your project in Visual Studio->Linker->Input->Additional Dependencies, add 'Database.lib;'

4) In project properties->VC++ Directories->Add project files path to Include and Library Directories

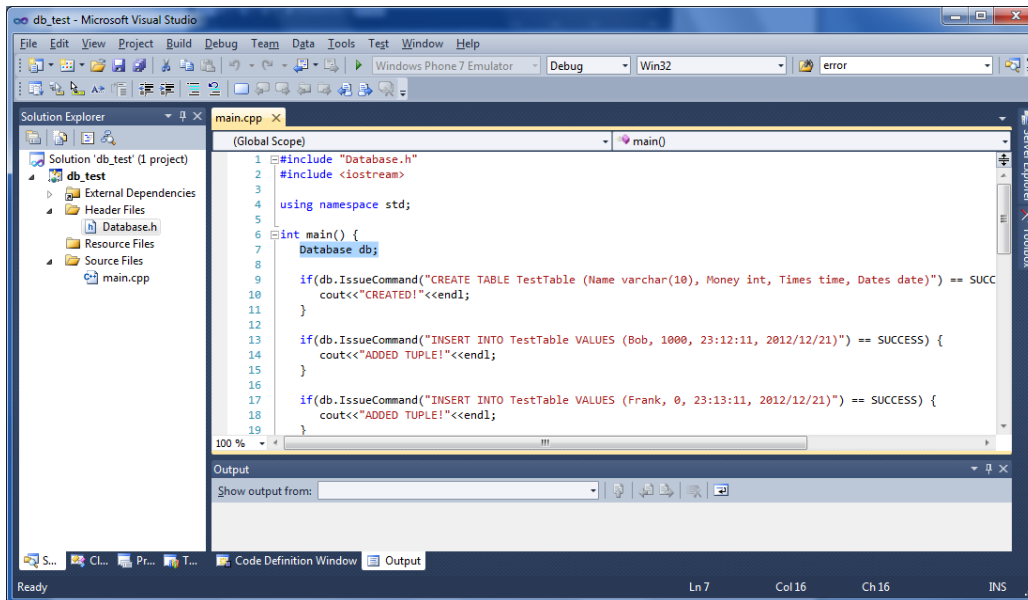

5) *Include Database.h in your project*

6) *Be sure to add #include "Database.h"*

7) *Create the database by creating a 'Database' class*

8) *HOPE THIS HELPS! Contact us if you have questions.*
